ABSTRACT

This report provides the documentation for a proposed interactive videodisk to be produced for use in orienting freshman students to the Harvey A. Andruss Library of Bloomsburg University (Pennsylvania). A rationale for the project and a plan of action are followed by a production time line and tentative program outline. An outline of the library orientation program indicates the topics to be covered, including building facilities, the various types of resources in the library collections, library services, and policies. A set of flowcharts for the project is also provided, and a video-computer-audio script for the videodisk recording concludes this report. (EW)

Needs Assessment

Without an orientation to an academic library, a new user will be at a disadvantage. This is especially so for a first-time academic library user, but even users experienced at other libraries may be disoriented since there are many dissimilarities in library practice. Before users can successfully retrieve library materials, they need to know how library materials are indexed, cataloged, classified, and arranged, and the location of collections and services within the library.

Libraries have tried many methods to orient new users: guided tours, audio cassette tours, self-guided tour sheets, signage, film and filmstrips (occasionally) and (recently) microcomputer programs. None of these have proved entirely satisfactory because they have not met the following orientation criteria:

Comprehensive
Need oriented - Any service or collection can be described when needed without the entire orientation being presented.

Visual presentation of materials and service points with building locations

Feedback to user on knowledge on library gained

No annoyance to other library users

Plan of Action:

This proposal requests funds to purchase a video disk player for an interactive video disk orientation to the Harvey A. Andruss Library. Interactive video, the marriage of video formats to computer access, meets the criteria for the ideal library orientation described above. Video can simulate movement as well as provide stills of actual library materials and locations. Computer programming can provide branching to only those areas of interest selected by the user and instant feedback to answers given to questions teaching user knowledge. Although more expensive to produce than video-tape, video disk sequences faster - a distinct advantage for users anxious to retrieve information without delay. It can accommodate both

the user who wants information on one library resource and the user who is willing to sit through the entire library orientation.

The production of the orientation will be done locally under the direction of the applicant, who has been granted 1/4 released time during the summer of 1986 and $700 faculty development monies in support of the project. The applicant has fourteen years experience as the coordinator of the Andruss Library's orientation and library instruction program, served five years as chairman of the Pennsylvania Library Associations Library Instruction Committee. He will be assisted in most phases of the production by the Center for Instructional Systems Development, which specializes in interactive video production.

University students, under careful supervision, will do the videotaping and computer programming. Narration will be done by professional actors, members of the Bloomsburg Theater Ensemble. A production time line and tentative program outline follow:

Objective and Evaluation:

Library users will be expected to correctly define and identify the arrangement and location of key library resources and services after completing the appropriate section of the I/V orientation. Formative evaluation will be done as soon as the disk is programmed and summative evaluation will follow the revised production. Subjects will be first semester University freshmen.

Budget:

$2200 of the costs for this project are being requested from the University's computer equipment budget, and $700 has been approved from the faculty development fund. $2400 is being requested from the Bloomsburg University Foundation to purchase a Panasonic 2024 video disk player. This is a discounted price from Edudisk through the Center for Instructional Systems Development.

ANDRUSS LIBRARY INTERACTIVE VIDEO ORIENTATION
